

PARTH ROHIT

London, UK | parthrohit60@gmail.com | +44 07917 057726 | [LinkedIn](#) | [GitHub](#)

Final-year BSc (Hons) Computing Systems student (Dean's List) with experience designing backend, cloud-native, and distributed systems using Python and TypeScript. Built stateful edge applications, Azure cloud platforms, and open-source security tooling, delivering systems from architecture and implementation through deployment and testing.

PROJECTS

LYTA - Stateful AI Workspace (TypeScript, Cloudflare Workers, Durable Objects) | 2026 | [Demo](#) | [GitHub](#)

- Designed a stateful edge architecture using Durable Objects to maintain consistent workspace ownership
- Built scalable backend services for chat persistence, file processing, and retrieval-augmented responses
- Implemented real-time streaming workflows and conversation memory using Server-Sent Events
- Developed isolated workspace and conversation boundaries supporting concurrent user interactions

OpenShield (OWASP) – Open-Source Azure CSPM Platform | Python, Azure, Flask | [GitHub](#)

- Engineered Azure security scan rules and remediation playbooks for cloud misconfiguration detection
- Validated scanner accuracy using intentionally vulnerable Azure resources across storage, network, and identity
- Performed end-to-end testing of detection, API, database, compliance, and dashboard workflows
- Contributed compliance mappings aligned to CIS Azure, NIST CSF, ISO 27001, and SOC 2 frameworks

KALYX - Execution Integrity Platform (Python, FastAPI, Hash-Chained Ledger) | 2026 – Present

- Designed a hash-chained ledger for deterministic verification and tamper-evident execution records
- Built concurrent-safe ingestion pipelines using canonical hashing, validation, and file locking
- Developed backend services and APIs supporting verification, detection, checkpointing, and audit workflows
- Created comprehensive automated tests covering integrity verification, corruption detection, and API behaviour

FieldSight - Cloud-Native Multimedia Platform (Azure, Node.js, Cosmos DB, Blob Storage) | 2026

- Designed and deployed a cloud-native platform using Azure App Service, Cosmos DB, and Blob Storage
- Built REST APIs supporting multimedia observation records with validation and centralized error handling
- Implemented telemetry and monitoring using Azure Application Insights for performance and exception tracking
- Automated deployment through GitHub Actions CI/CD and evaluated cloud scalability and cost trade-offs

SKILLS

Languages: TypeScript, Python, Java, SQL

Frameworks: Angular, FastAPI, Flask

Backend & APIs: REST APIs, JWT Authentication, RBAC, OpenAPI

Cloud & Platforms: Cloudflare Workers, Durable Objects, Workers AI, Azure

Databases: MongoDB, MySQL, SQLite, Cosmos DB

Tools: Git, Postman, Vitest, JUnit, GitHub Actions

WORK EXPERIENCE

Operations & IT Support Assistant

Kukreja & Associates (Advocacy Firm), Vadodara, India | July 2021– Dec 2023

- Automated internal operational workflows, reducing manual workload by 10+ hours per month.
- Provided IT support across systems, networking, and hardware environments for 50+ users.
- Diagnosed technical issues and implemented process improvements to improve operational reliability.

EDUCATION

University of Ulster, London, UK

BSc (Hons) in Computing Systems | Expected Sep 2026

Dean's List – Academic Excellence (Year 1 & Year 2)
